Simplify Contract Data Extraction with AI-Powered Software

Brightleaf's AI-based extraction engine uses semantic intelligence and natural language processing technologies to deconstruct and analyze contracts to extract any information, including, but not limited to data elements, commercial terms, legal provisions/clauses, obligations, and even tables from contracts.

Brightleaf's powerful AI extraction software can be embedded into the workflow of any CLM platform system to enable quick extraction of meta-data from contracts. This integration allows for the reviewer to verify or change any extracted information before populating the agreement record into the system. Clauses and provisions can also be compared to the standard clause library for redlining. Tables can be extracted and ingested into the configured platform agreement record.

Unlock the Hidden Value of Contracts

Power of Platform

- Detect/Extract clause and provision
- Table Extraction
- Standard clauses v/s Non-Standard clauses comparison
- Compare and red-line clauses against your standard clause library
- Check extracted information visually against your original document
- Quality check within the application

Security

For us security of your data and quality of our out put is the first priority, Brightleaf is:

ISO 27001:2013
Certified

SOC 2 Type 1
Attested

ISO 9001:2015
Certified

About Brightleaf:

Meet our Software: Brightleaf has its own AI/NLP Software to analyze contracts and extract/track all meta-data elements, clauses/provisions, obligations, and any custom attribute to client specifications. This AI Software can be licensed by companies as SaaS software. The extraction engine has also been integrated into CLM systems for Third-Party Paper data extraction and legal review. Please [click here](#) for more info.

Meet our Service: Brightleaf uses its AI Software for legacy contract migration into a CLM system, providing a complete service for meta-data/clause extraction, clause comparison, contract risk scoring, etc. for a large number of contracts. This service includes de-duplication of documents, matchups of masters and addendums/creation of contract hierarchy, renaming files, etc. so that perfect data, the original file, and the OCR'd PDF file are ingested into a CLM.
